

# EF 2

ROVEMA – American Case Packer

## Highlights

- Small foot print due to compact design
- User-friendly layout
- Clearly structured and good accessibility
- Combined with productive grouping systems
- Gentle product handling
- Alternatively in tape or hot melt execution
- Quick and repeatable size change over
- Modular expandable
- Easy cleaning

- Filling
- Bagging
- Cartoning
- **Case Packing**
- Turnkey Systems

# EF 2

## ROVEMA – American Case Packer

With the AC – Packer EF 2 the proven ROVEMA philosophy for the final packaging continues. The machine is compact, direct and flexible with a convincing price / performance ratio.

### Gentle product handling and reliable operation

The complete erecting, filling and closing process only takes place at two stations. Thus, usual interference sources are reduced to a minimum and the functional reliability increases considerably. The case blanks are held safely and precisely positioned in all stations throughout the whole packaging process. This optimum packaging process leads to geometrically exact packages. As product and packaging are treated carefully, the whole packaging process runs safely and in a controlled manner. Due to the hygienic design the machines are accessible and visible from all sides and so they are very easy to clean. Flexible grouping systems – cycle chain or collecting conveyor for goods to feed into case enable different product orientation in the case.

### Effective and economic

The quick format change over is reproducible by custom specific parameters, adjustment spindles and size parts. Thus downtimes are reduced and an economic and effective production process is ensured. Integrated into the whole packaging process the level of automation will be increased at an excellent price-performance ratio.

### Safe operation with ROVEMA-P@ckControl

The Rovema control system ROVEMA-P@ckControl guarantees an absolutely safe handling of the machines. Control mechanisms and dynamic limit calculation modules do not accept wrong or unreasonable data input. The operator can also use the integrated online-help with the comfortable navigation on the Touch Screen, if required.

### Benefits and advantages on the EF 2

- Space-saving due to compact construction, robust and solid.
- User-friendly low, ergonomic arrangement of blank magazine
- Easy to clean due to clear structure and good accessibility
- Gentle product handling by direct and smooth operation
- Ideal supplemented by innovative and productive grouping systems
- Rapid and safe format size change over for economic production
- Optional features such as tray module or external top closing for additional functions.

### EF 2

- Up to 12 AC cases per minute\*
- Destacking – grouping system
- Axis functions with servo drive
